

# SANITARY DIAPHRAGM VALVE

## 卫生级隔膜阀

### AG卫生级隔膜阀系列

#### AG SANITARY DIAPHRAGM VALVE SERIES

##### 产品概述

无菌隔膜阀广泛应用于食品和生物制药以及半导体超纯行业，微电子工业，精细化工行业。对防细菌滋生、注重清洗、灭菌性能的应用场合中，无菌隔膜阀是一款理想的产品，采用静态密封的隔膜阀其密封组件不具备磨耗性、阀门结构无死角，因而更卫生、更耐用。

##### 特点

- 阀体有铸造和锻造可供选择，适用于国内外客户的不同使用需求。
- 产品规格齐全，从DN10~DN80任意规格可选。
- 进口材质膜片，耐腐蚀性好，符合美国FDA食品级要求，并通过SGS检测合格。
- 阀体周围的凸台与膜片对应位置的凸起筋咬合密封，确保膜片在打开或关闭状态都能与阀体紧密密封，实现“零”残留，易清洗，符合EHEDG设计标准。
- 常闭式膜片结构，手动开关更省力。
- 旋转手轮可通过调节限位螺母实现过度闭合保护，已确保膜片有预订的关闭压力，优化了密封功能的安全性，延长了膜片的使用寿命。
- 手轮与上盖之间的红色开关显示，可目测阀门的开关状态及开关程度。
- 气动阀门可根据客户需求加装电磁阀、位置反馈或定位调节器，实现阀门的自动控制或流量调节。

##### PRODUCT DESCRIPTION

Sterile diaphragm valves are widely used in food and biopharmaceutical as well as semiconductor ultrapure industries, microelectronics industry, and fine chemical industry. For applications that prevent bacterial growth and focus on cleaning and sterilization performance, the aseptic diaphragm valve is an ideal product. The static sealing diaphragm valve has no abrasive sealing components and without dead ends in the valve structure, so it is more hygienic and more durable.

##### FEATURES

- The valve body is available in casting TYPE or forged Type, which is suitable for different usage needs of domestic and foreign customers.
- Complete product specifications, any specifications from DN10 to DN80 are available.
- The diaphragm is made of imported material, has good corrosion resistance, meets the US FDA food grade requirements, and has passed SGS testing.
- The valve body raise piece and the raised ribs at the corresponding position of the diaphragm are engaged and sealed to ensure that the diaphragm can be tightly sealed with the valve body in the open or closed state, achieving "zero" residue, easy cleaning, and compliant with EHEDG design standards.
- Normally closed diaphragm structure, manual switch saves energy.
- The rotating handwheel can realize over-closing protection by adjusting the limit nut, ensuring that the diaphragm has a predetermined closing pressure, optimizing the safety of the sealing function and extending the service life of the diaphragm.
- The red switch display between the handwheel and the upper cover allows visual inspection of the valve's switching status and degree.
- Pneumatic valves can be equipped with solenoid valves, position feedback or positioning regulators according to customer needs to achieve automatic control or flow adjustment of the valve.

# DIAPHRAGM VALVE

## DIAPHRAGM

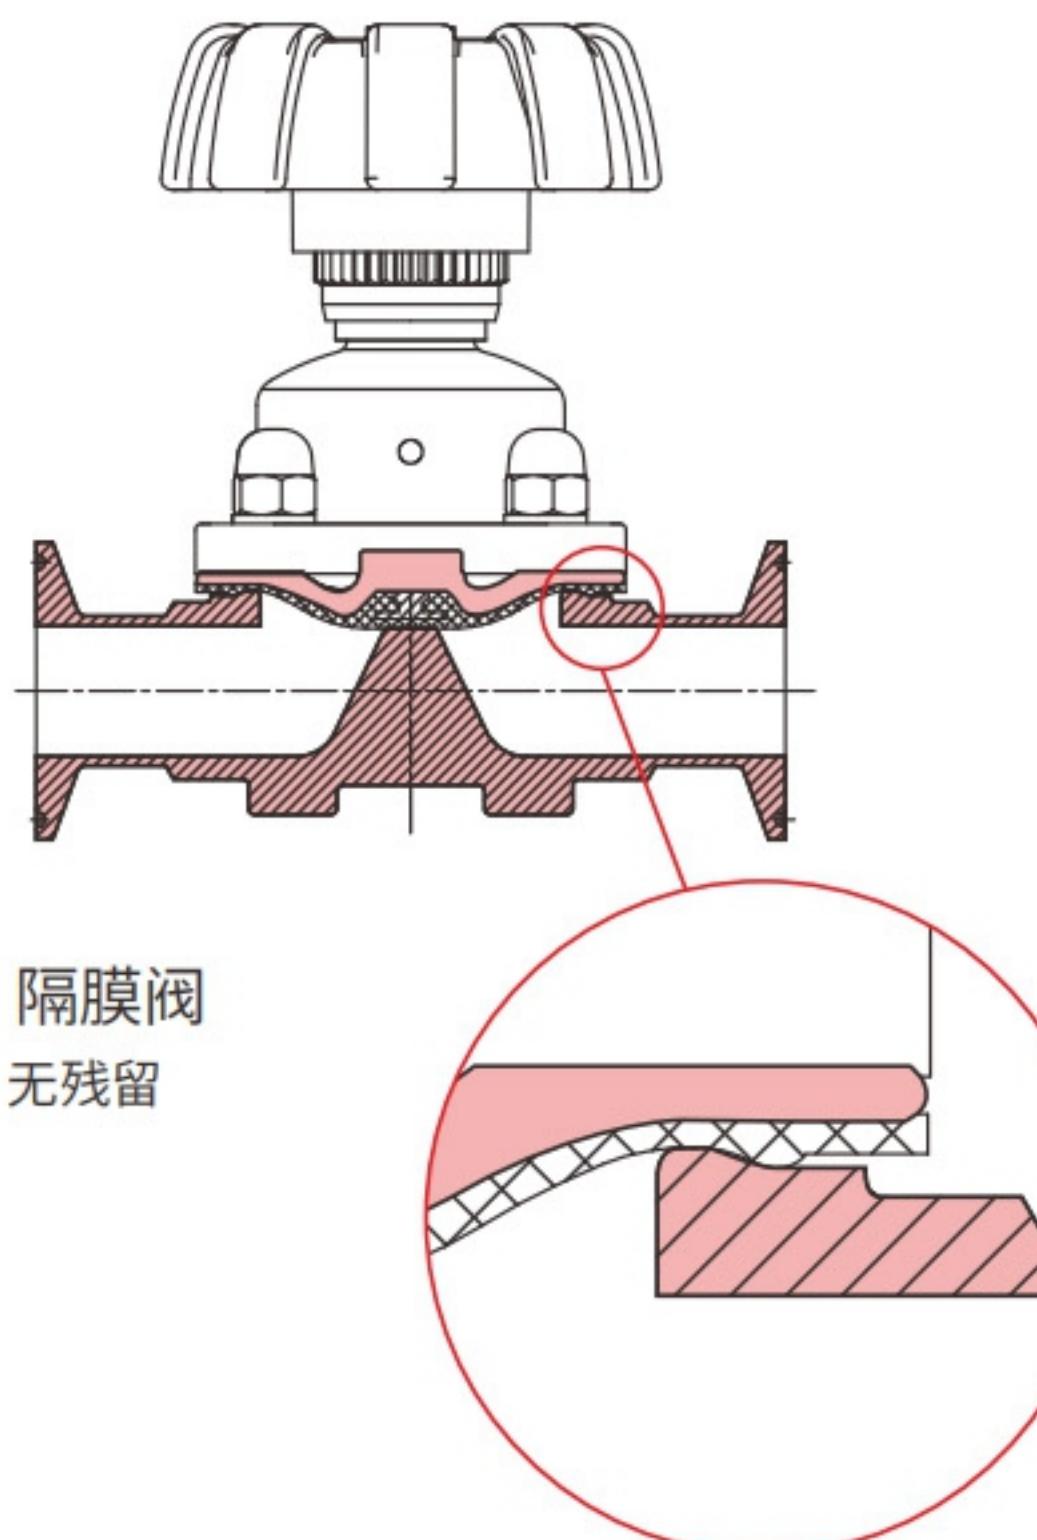

Separate Diaphragm, Composite Diaphragm  
Single Diaphragm

### 隔膜阀膜片

分离膜片 / 复合膜片 / 单膜片

### 膜片 DIAPHRAGM

隔膜阀  
无残留

#### 膜片

与传统的隔膜阀阀体不同，无菌隔膜阀阀体上有一条紧密扣在内径上的密封突起，这可以减少膜片与阀体之间的环形间隙。隔膜阀的这一特点使之特别适用于无菌制程。

#### DIAPHRAGM

Different from the traditional diaphragm valve body, the aseptic diaphragm valve body has a sealing protrusion that tightly snaps on the inner diameter, which can reduce the annular gap between the diaphragm and the valve body. This feature of the diaphragm valve makes it particularly suitable for aseptic processes.

#### DIAPHRAGM MATERIAL

Diaphragms are available in EPDM rubber and TFM rubber, with single and double diaphragms optional. The dual diaphragm design allows the two diaphragms to operate independently, which reduces tension caused by different thermal properties. Each application has different operating conditions and therefore different requirements for the diaphragm. To select the diaphragm that is best for you, consider the following factors: operating pressure, application temperature, process fluid. EPDM can be suitable for most application conditions, and some high-temperature conditions require the use of TFM material diaphragms.

#### 技术参数

##### TECHNICAL PARAMETERS

项目	数据
控制方式	手动 气动常闭/双动
自动控制	反馈装置, 自动调节器, 气缸行程开关
阀体材质	CF3M(316L), 1.4435(316L)
膜片材质	EPDM, EPDM+PTFE
尺寸规格	DN10-DN80
连接方式	焊式/卡式/焊卡式 ASME BPE, 3A, ISO, DIN
表面处理	外表面喷砂 内表面Ra≤0.5μm(SF1), Ra≤0.375μm(SF4)

膜片可单独购买

	接口口径	DN10~DN50	DN65/DN80
工作环境	EPDM	工作压力 流体介质 蒸汽灭菌	10bar -10°C~130°C, 14~212°F 150°C, 302°F max.60min
	EPDM+TFM	工作压力 流体介质 蒸汽灭菌	6bar, 87psi -10°C~150°C, 14~212°F 150°C, 302°F no.limit
控制压力	常闭(NC)	常闭(NC)	5-6bar, 72-87psi 5-7bar, 72-101psi
	常开(NO)	常开(NO)	5.5bar, 79psi
	双动(DA)	双动(DA)	5.5bar, 79psi
	气动接口	G1/8"	G1/4"

EPDM 和 TFM 膜片若长期在上述温度下使用，会导致膜片使用寿命减少。因此需要视情况调整保养周期。  
TFM 膜片也可以用于截止蒸汽，但这会造成使用寿命的降低，应适当调整保养周期。

要求	符合FDA USP 证书与许可证					特点

## 无菌取样隔膜阀

## ASEPTIC SAMPLING DIAPHRAGM VALVE

串联阀有各种不同的角度和位置可供选择。串联阀有锻造材质或铸造材质可供选择(如图所示)。

主阀水平自排尽安装, 支阀左侧垂直安装。

主阀水平向上安装, 支阀右(左)侧垂直安装。

主阀水平自排尽安装, 支阀左侧水平自排尽安装。

主阀垂直安装, 支阀上部水平自排尽安装。

## 阀体

### VALVE BODY

#### 概述

我们提供一应俱全并得到普遍认可的各种高质量阀体。有铸造、锻造两种制造方式可选，并严格控制铁素体含量和硫含量。

铸造型的隔膜阀阀体具有良好的经济性，参照美标选用的优质材料能够具有更好的通用性。锻造成型并精密加工的阀体具有极致密的结构和更好的化学稳定性，在抗表面氧化和长期的抗腐蚀性能方面，锻造阀体具有显著的优势，因而在长期使用过程中能够更好的保证产品的高品质。

#### OVERVIEW

We provide a comprehensive range of high-quality valve bodies that are universally recognized. There are two manufacturing methods available: casting and forged, and the ferrite content and sulfur content are strictly controlled.

The cast diaphragm valve body has good economy, and the high-quality materials selected according to American standards can have better versatility. The forged and precision-machined valve body has an extremely dense structure and better chemical stability. In terms of surface oxidation resistance and long-term corrosion resistance, the forged valve body has significant advantages, so it can ensure the high quality of the product during long-term operation.

阀体形式	铸造	锻造	锻块

硫含量	< 0.04%	0.005-0.017%

#### 自排尽功能介绍

无菌隔膜阀拥有出色的自排尽性能，能够在横向安装和纵向安装时都保持优秀的自排尽能力。利用阀门自排尽的特性需要管路设计者和使用者的配合。

影响自排尽的因素主要包括以下方面：

- 阀门尺寸和管道规格
- 内表面光洁度和处理方式(Ra)
- 排空方向
- 介质的表面张力和粘稠度
- 管道的设计倾角 - 推荐采用2~3度

#### INTRODUCE THE SELF-DRAINING FUNCTION

Aseptic diaphragm valves have excellent self-draining performance and can maintain excellent self-draining capabilities in both horizontal and vertical installations. Utilizing the self-draining characteristics of valves requires the cooperation of pipeline designers and users.

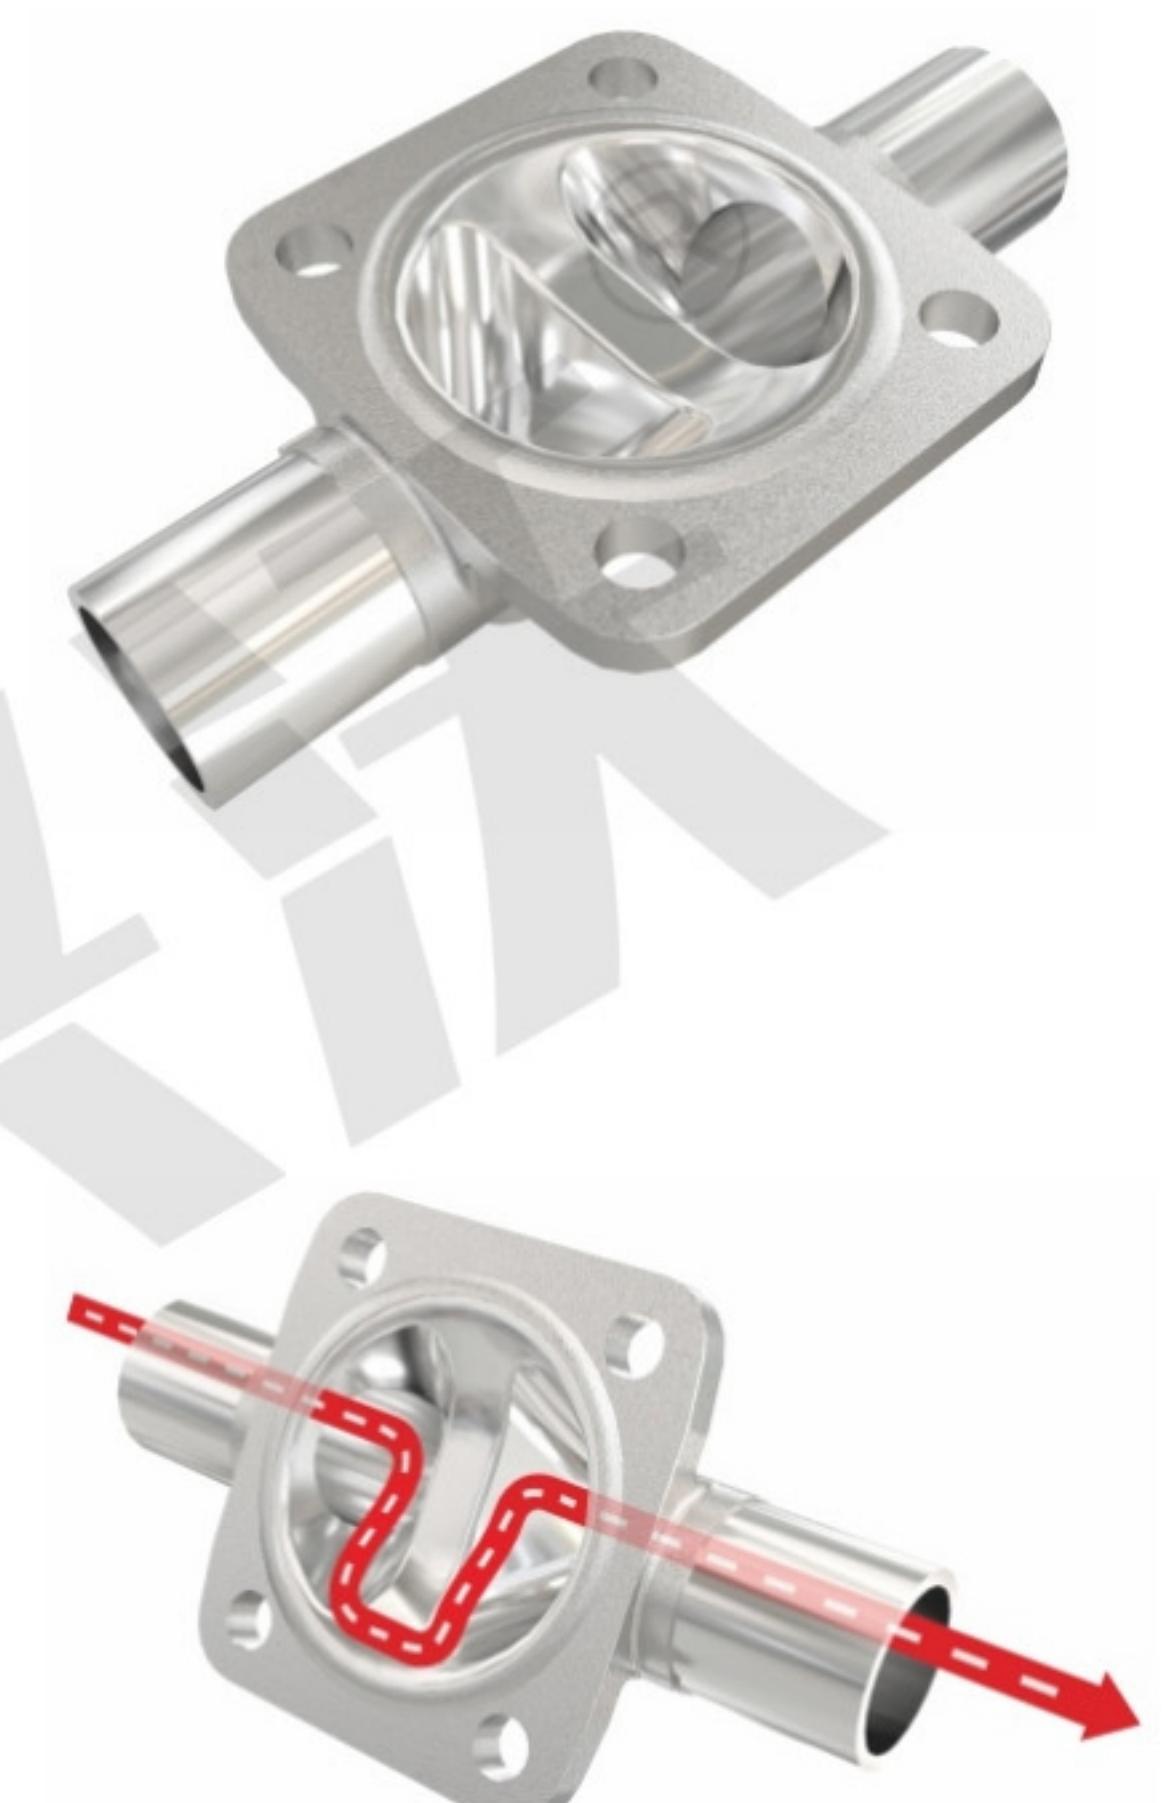

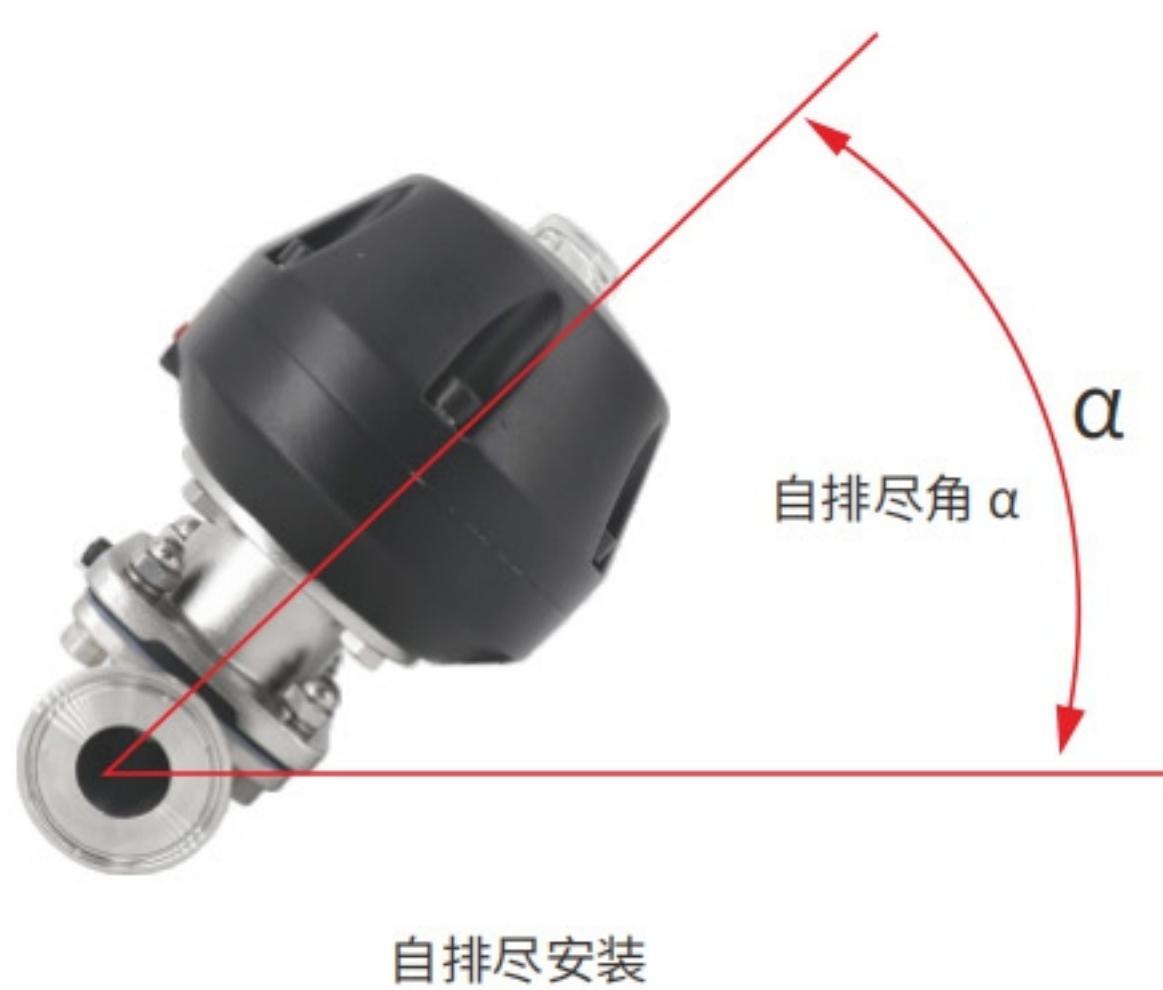

There are some factors affecting self-drainage mainly include the following aspects:

- Valve sizes and pipe specifications
- Internal surface finish and treatment (Ra)
- Empty direction
- Surface tension and viscosity of the medium
- Design inclination angle of the pipeline - 2~3 degrees is recommended

#### 自排放角度对照表

## 比例调节隔膜阀

### PROPORTIONAL REGULATING DIAPHRAGM VALVE

#### 工作原理

智能调节定位器是一款基于微处理器控制的阀门开度调节器。阀门的开度大小可通过外部输入信号来设定，可广泛应用于工业流体控制系统中，并实现远程自动控制。

#### WORKING PRINCIPLE

The intelligent adjustment positioner is a valve opening regulator based on microprocessor control. The opening of the valve can be set through external input signals, and can be widely used in industrial fluid control systems and achieve remote automatic control.

#### 特点

1. 结构紧凑，外形小巧，更好的满足空间限制；
2. 性能稳定可靠，反应灵敏；
3. 大屏LCD显示，操作简便；
4. 标准电气接口，接线方便；
5. 调节精度高，抗干扰能力强；
6. 弹簧弹出式反馈杆，安装方便；
7. 接口丰富，可适应多口径连接。

#### FEATURES

1. Compact structure and small appearance,better meeting space constraints;
2. Stable and reliable performance, sensitive response;
3. Large-screen LCD display, easy to operate;
4. Standard electrical interface, convenient wiring;
5. High adjustment accuracy and strong anti-interference ability;
6. Spring pop-up feedback lever, easy to install;
7. Rich interfaces, adaptable to multi-diameter connections.

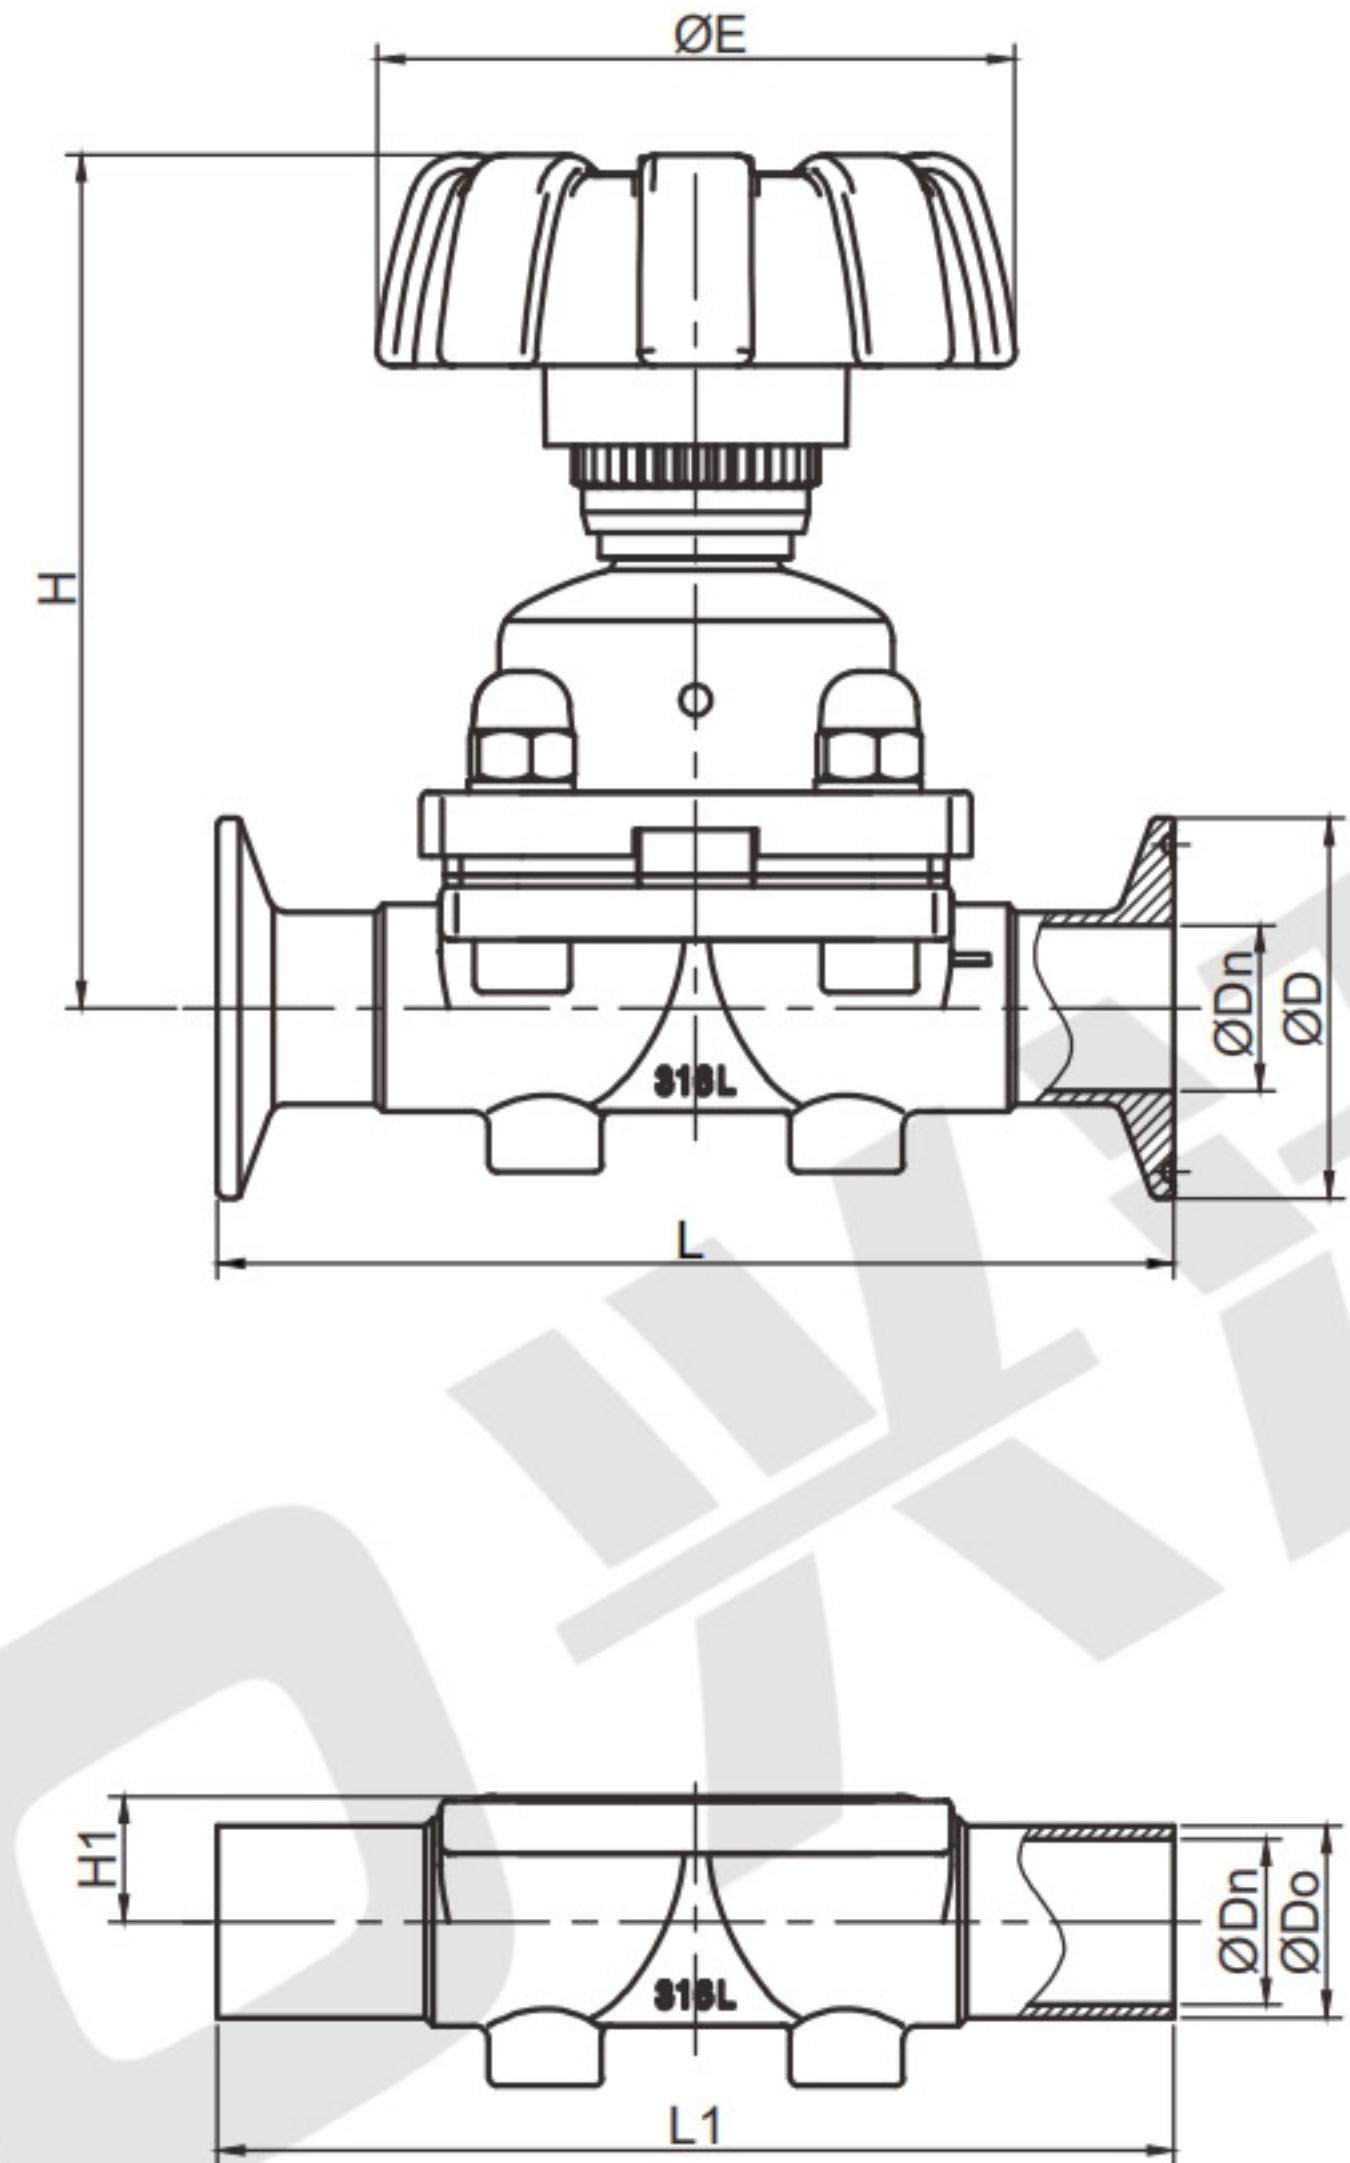

#### 技术参数

##### TECHNICAL PARAMETERS

工作电压	DC12V~DC36V(机械式)/DC12V~DC30V(无触点式)
工作电流	MAX.300mA(机械触点式)/MAX.100mA(无触点式)
指示灯	直观反应阀门启闭状态
环境温度	-10°C~+60°C
环境湿度	≤90%RH
防护等级	IP65
防爆等级	Ex nA IIC T4
壳体材质	PA6-GF30+PC
开关方式	机械触点式/磁感无触点式
输出选择	0S2-四线PNP/四线NPN/三线PNP 0S3-多输出/无触点
接线方法	旋开透明盖，将电缆从电缆口穿入，并连接到需求的端子上。

## 三通隔膜阀

TEE PNEUMATIC DIAPHRAGM VALVE

### 无菌锻造隔膜阀特点

- 结构紧凑、充分自排尽, 无死角。
- 锻造阀体在长期的抗表面氧化和耐腐蚀性方面有明显优势。
- 先进设备一体化加工, 安装更安全、可靠。
- 结构紧凑, 符合 ASME BPE 结构设计。保证阀内介质流动和循环, 从而避免采用口存在流体滞留区而引发的细菌滋生隐患。

### 无菌铸造隔膜阀特点

- 结构紧凑、充分自排尽, 无死角。
- 先进铸造技术, 铸造本体铁素体含量严格控制在标准范围内。
- 先进设备一体化加工, 安装更安全、可靠。
- 主管道尺寸一般大于支管尺寸的设计, 保证主管道循环流量。
- 适用于高纯水系统上采用、排尽、用水点。

### FEATURES OF STERILE FORGED DIAPHRAGM VALVE

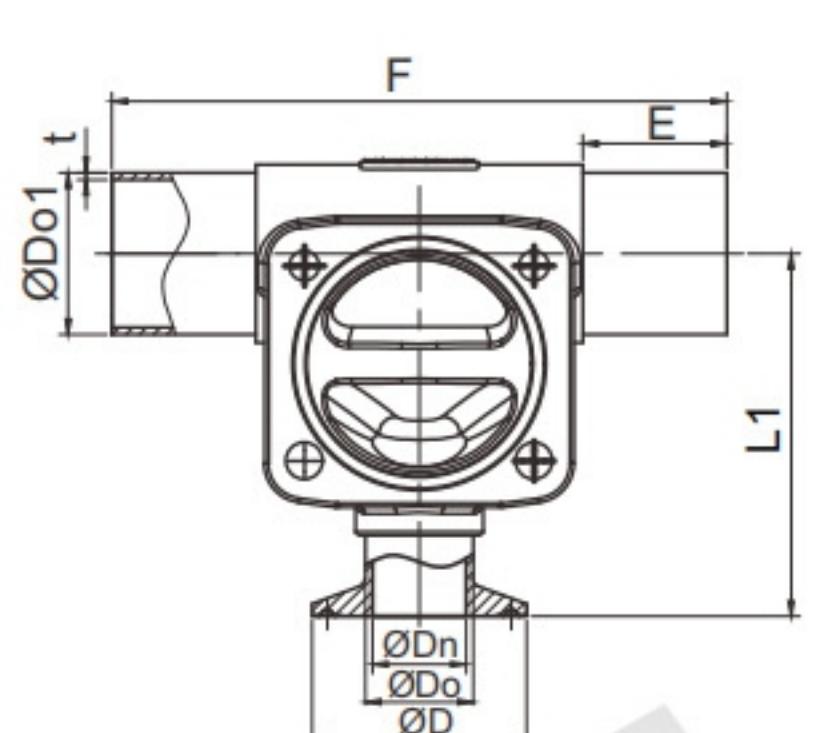

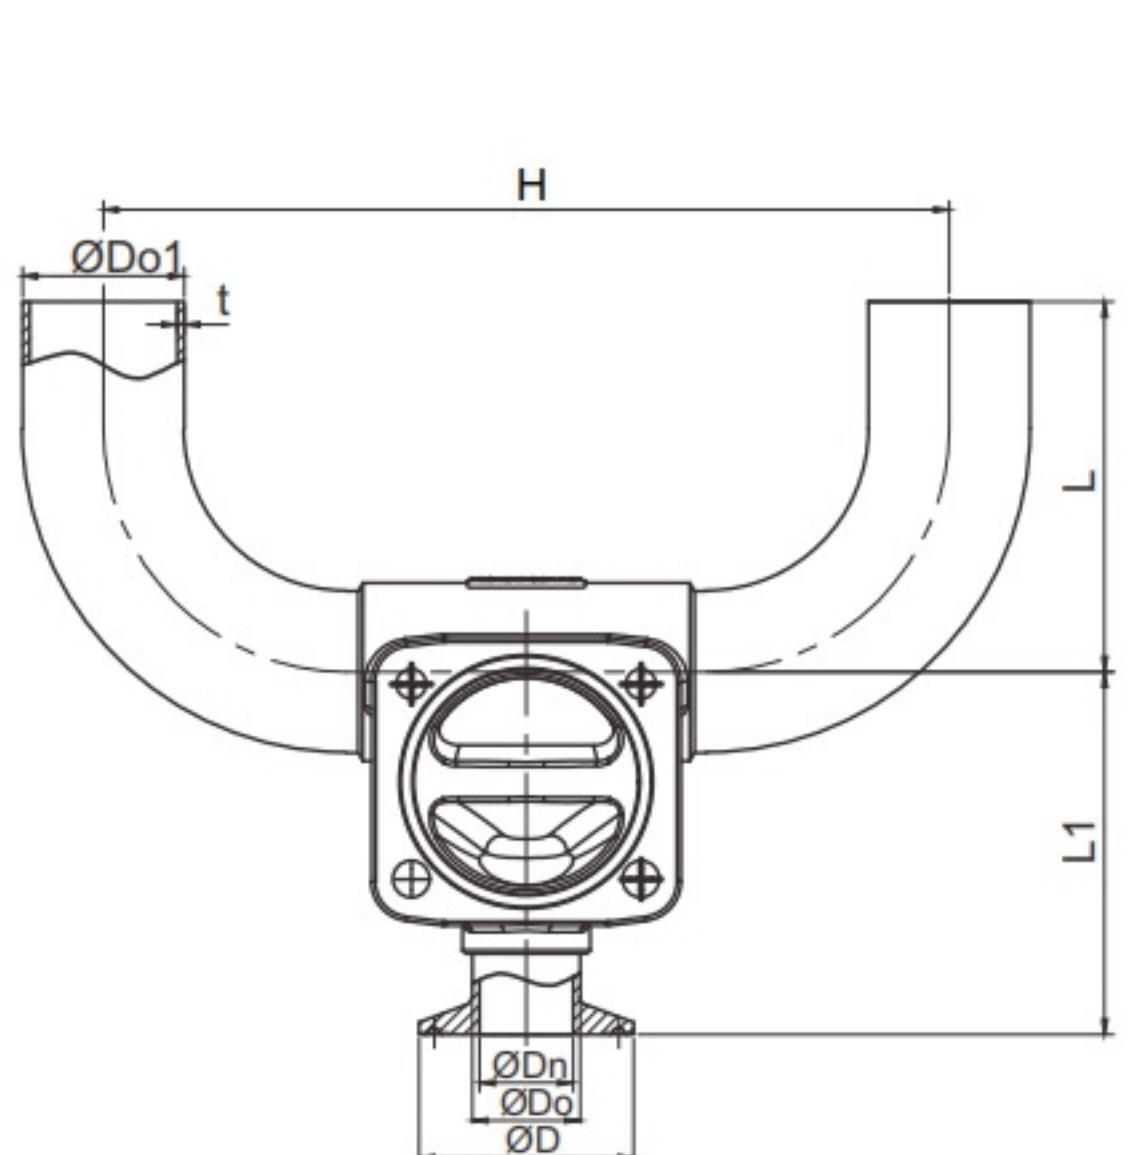

- Compact structure, fully self-draining, no dead ends.
- Forged valve bodies have obvious advantages in long-term surface oxidation and corrosion resistance.
- Integrated processing with advanced equipment, making installation safer and more reliable.
- Compact structure, in accordance with ASME BPE structural design to ensure the flow and circulation of the medium in the valve, thereby avoiding the presence of orifices, the potential bacterial growth hazards caused by fluid retention areas.

### CHARACTERISTICS OF ASEPTIC CAST DIAPHRAGM VALVE

- Advanced casting technology, the ferrite content of the casting body is strictly controlled within the standard range.
- Integrated processing with advanced equipment makes installation safer and more reliable.
- The main pipe size is generally designed to be larger than the branch pipe size to ensure the main pipe circulation flow.
- Suitable for use, drainage and water use points in high-purity water systems.

## U型三通隔膜阀(锻造)

U TYPE THREE-WAY DIAPHRAGM VALVE (FORGED)

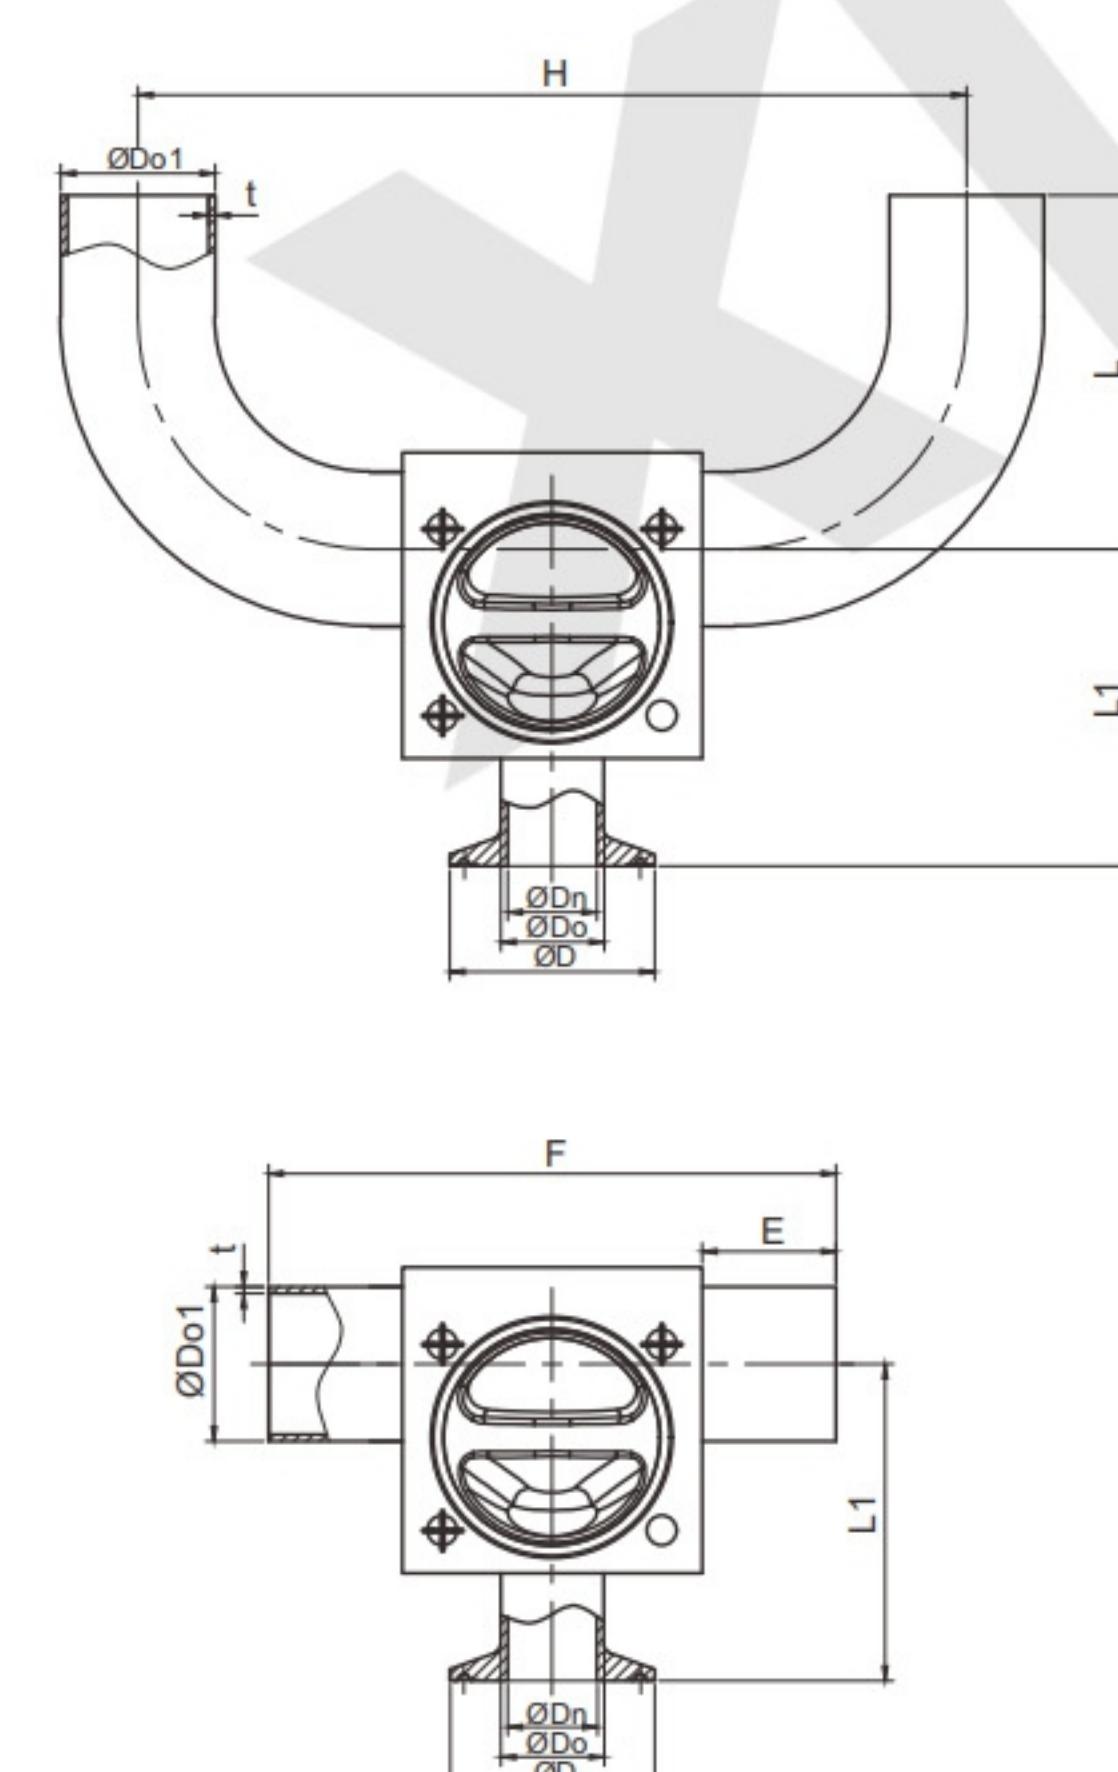

### 应用

在生产纯化水(PW)和注射用水(WFI)的循环回路中,应用点之一就是用水点阀。这种阀既要确保循环回路绝对安全,避免环境侵害,又要作为分接点消耗,因此这种阀具有最高级别的安全性、清洁性。

### 特点

避免U型三通支管焊直通隔膜阀隔堰之间的滞留,减少焊缝数,提高接触表面(MOC)的光洁度,具有最小长度的水平管路。BPE2012: SD-3.1.2.2, 消除因出料口产生的液体滞留区造成的细菌滋生隐患,确保循环回路绝对安全。

### APPLICATION

In the circulation loop for the production of purified water (PW) and water for injection (WFI), one of the application points is the water point valve. This kind of valve must not only ensure the absolute safety of the circulation loop and avoid environmental damage, but also serve as a tap point consumption, so this kind of valve has the highest level of safety and cleanliness.

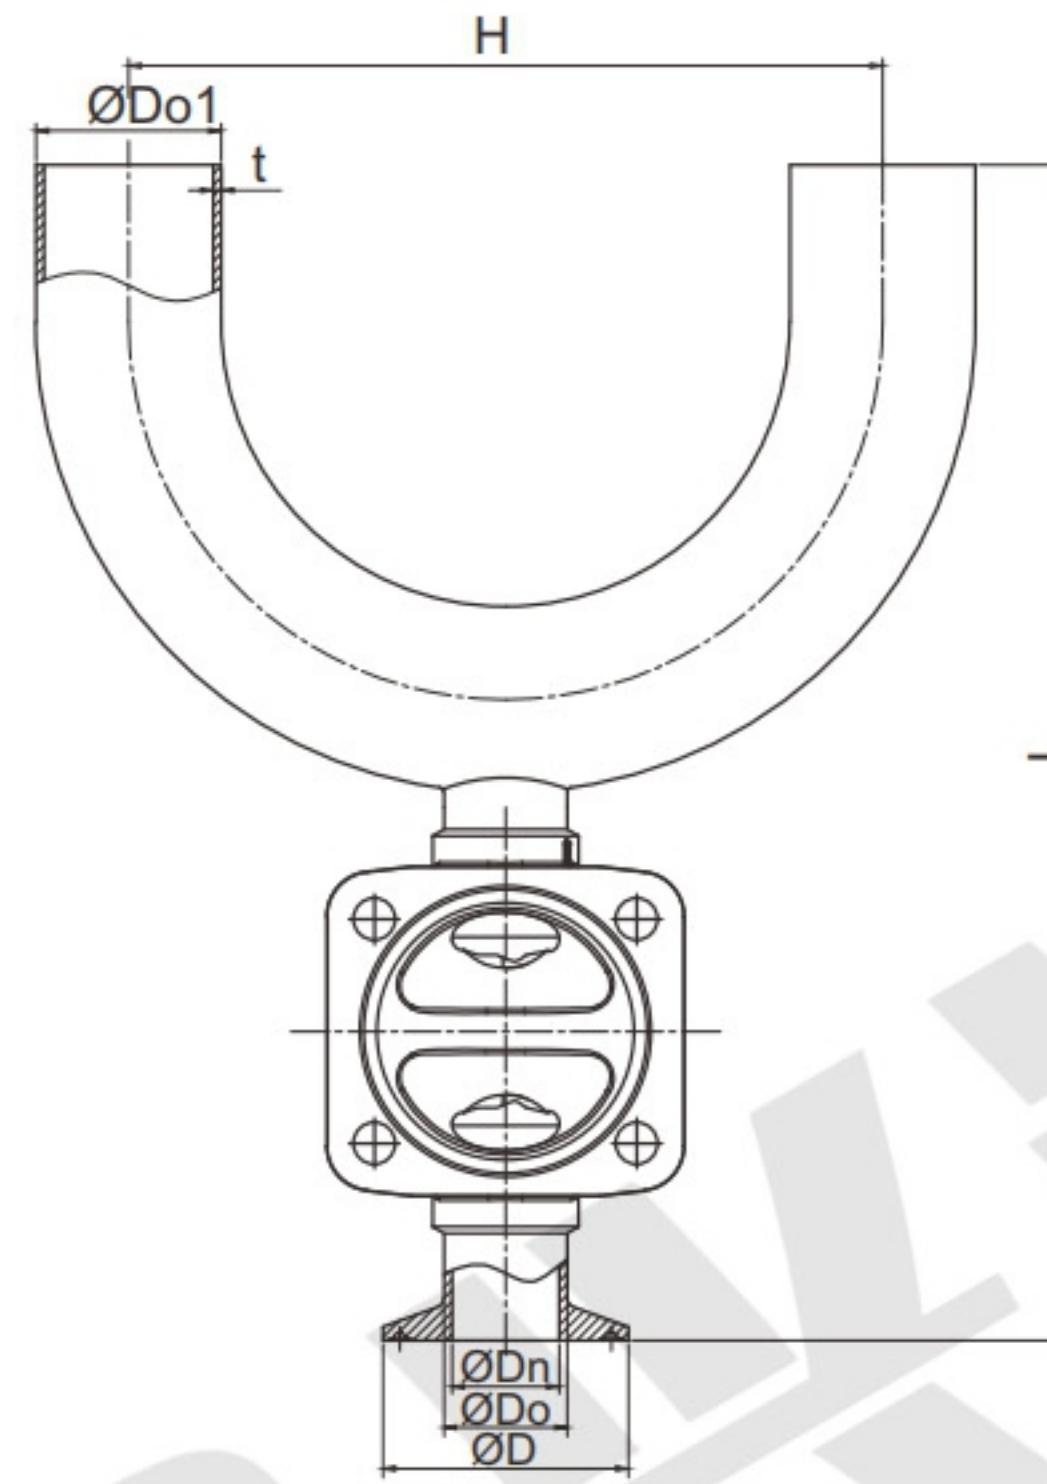

### FEATURES

Avoid stagnation between weirs of U-shaped tee branch welding straight-through diaphragm valves, reduce the number of welds, improve the smoothness of the contact surface (MOC), and have a minimum length of horizontal pipelines. BPE2012: SD-3.1.2.2, eliminate the hidden danger of bacterial growth caused by the fluid retention area caused by the discharge port, and ensure the absolute safety of the circulation loop.

## 罐底隔膜阀

TANK BOTTOM DIAPHRAGM VALVE

### 概述

罐底阀主要应用在医药、食品及饮料等行业，一般安装在罐底等处，起到取样、排水的作用，也可集成进行 SIP/CIP。罐底阀是在隔膜阀的基础上演变而成的，其密封堰是尽量靠近罐壁，避免罐底的死角。

### OVERVIEW

Tank bottom valves are mainly used in the pharmaceutical, food and beverage industries. They are generally installed at the bottom of tanks to play the role of sampling and drainage. They can also be integrated for SIP/CIP. The tank bottom valve is evolved on the basis of the diaphragm valve. Its sealing weir is as close as possible to the tank wall to avoid dead corners at the bottom of the tank.

### 技术参数

TECHNICAL PARAMETERS

项目	数据
工作压力	0-10bar, 145psi(EPDM) 0-7bar, 101psi(EPDM+PTFE)
工作温度	-40~130°C(EPDM) -40~150°C(EPDM+PTFE)
驱动方式	手动/气动
阀体材质	CF3M(316L), 1.4435(316L)锻块
表面处理	外表面喷砂 内表面 Ra ≤ 0.375μm(SF4)
连接方式	焊式/卡式 ISO, DIN, ASME BPE, 3A
